No-Welding Construction

Off-the-shelf, Readily Replaceable Parts

Fagolli's innovative construction method involves fusing all gate elements together into a single weld-free structure with premium aluminium. This also means all parts are replaceable, ensuring a smooth maintenance and repair process.

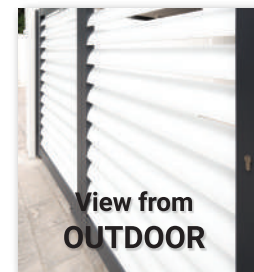

Seamless Joints & Hinges Design

In harmony with the clean lines of the gate design, every hinge joint blends naturally into the overall construction without uneven welding marks.

One-way Privacy

Our bifold gate is designed with privacy in mind. Wide aluminium panels are strategically orientated to create a one-way viewshed, letting you see out without others seeing in.

Louvered Design

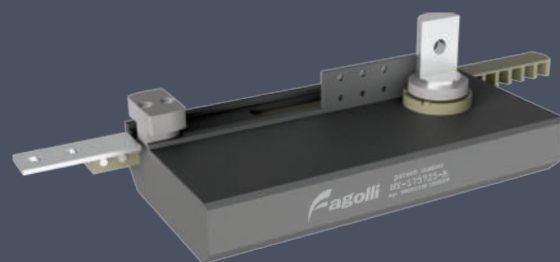

Aerodynamic Louvered Design

Fagolli has woven aerodynamic design into our gate panels. This allows strong winds to pass through easily, minimising the risk of gate damage or collapse.

Patented Trackless Folding Technology

Patented motion converter module - ENGINE 2, is designed for smoother trackless gate folding motion and performance.

ENGINE 2

Fagolli Cushion Link

Fagolli's innovative Cushion Link is strong, yet flexible, allowing the gate to absorb the impact of accidental collisions that could cause permanent damage, ensuring a longer-lasting autogate.

Pedestrian-safe Key Switch Access

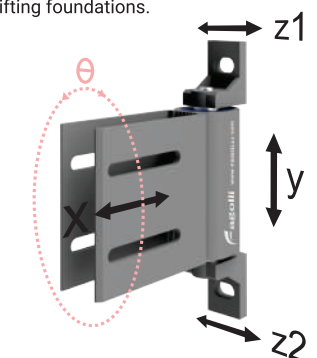

NEWLY LAUNCHED FEATURE

This user-friendly design feature enables easy access for pedestrian gate users through the use of a smart key. Turning the key automatically opens a fixed gap in your gate, avoiding common safety hazards associated with the traditional small gate door (e.g. tripping and head-bumping).

4D Adjustable Main Hinge

Our innovative main hinge is both precise and adjustable. This guarantees an accurate installation process as well as a future-proofed solution in case of pillar misalignment from shifting foundations.

Universal Power Unit

Three-mode power source options to power your gate. Our agile design allows you to switch around power source options.

Solar Power

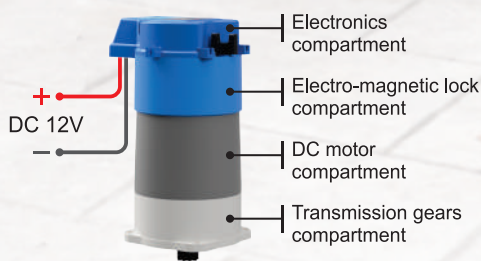

AC Power

Battery Power

Fagolli FR2552 All-in-one Smart Motor

Innovative compact motor design for easy repair, maximising reliability and minimising running costs.

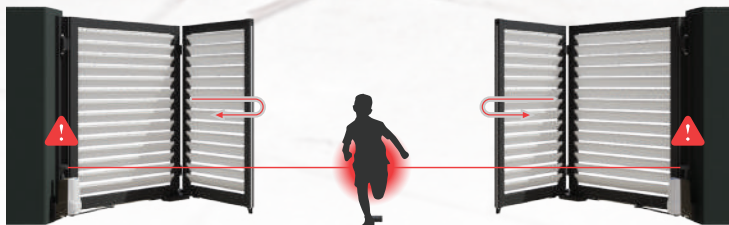

Built-in Features

- Manual override
- Backup battery
- Automatic close timer *
- Beep sound
- Panic alarm
- Anti-spy remote controls

ADDITIONAL SMART FEATURES

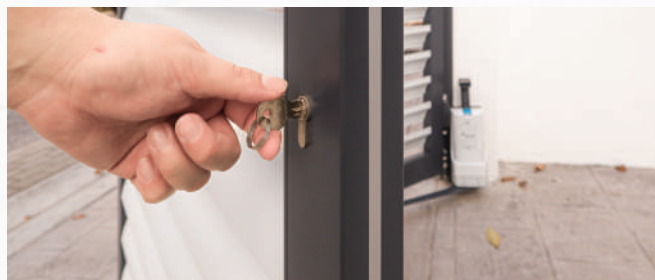

Infrared Safety Beams *

When obstacles are detected during gate closing mode, our gates will automatically stop, followed by a soft open. This essential safety feature keeps your family, vehicles and pets safe.

Pedestrian Key Switch Access *

The first of its kind in Malaysia - a revolutionary autogate function for improved pedestrian access and safety. Speak to our sales representative for more information.

Smart App Remote Control *

Gain more control options over your autogate using your smart phone through Fagolli's IoT Hub. Your phone also doubles as a backup safety device in case of emergencies.

*Additional features subject to extra charges. Enquire with our sales representative for pricing details.
